

Network Layer Part 2

Mark Allman
mallman@case.edu

EECS 325/425
Fall 2018

#Rally

These slides are more-or-less directly from the slide set developed by Jim Kurose and Keith Ross for their book “Computer Networking: A Top Down Approach, 5th edition”.

The slides have been lightly adapted for Mark Allman’s EECS 325/425 Computer Networks class at Case Western Reserve University.

Reading Along ...

- Network layer is chapters 4
- 4,2: what's inside a router?

Router Architecture Overview

Router Architecture Overview

two key router functions:

Router Architecture Overview

two key router functions:

- ❖ run routing algorithms/protocol (OSPF, BGP)
- ❖ forwarding datagrams from incoming to outgoing link

Router Architecture Overview

two key router functions:

- ❖ run routing algorithms/protocol (OSPF, BGP)
- ❖ forwarding datagrams from incoming to outgoing link

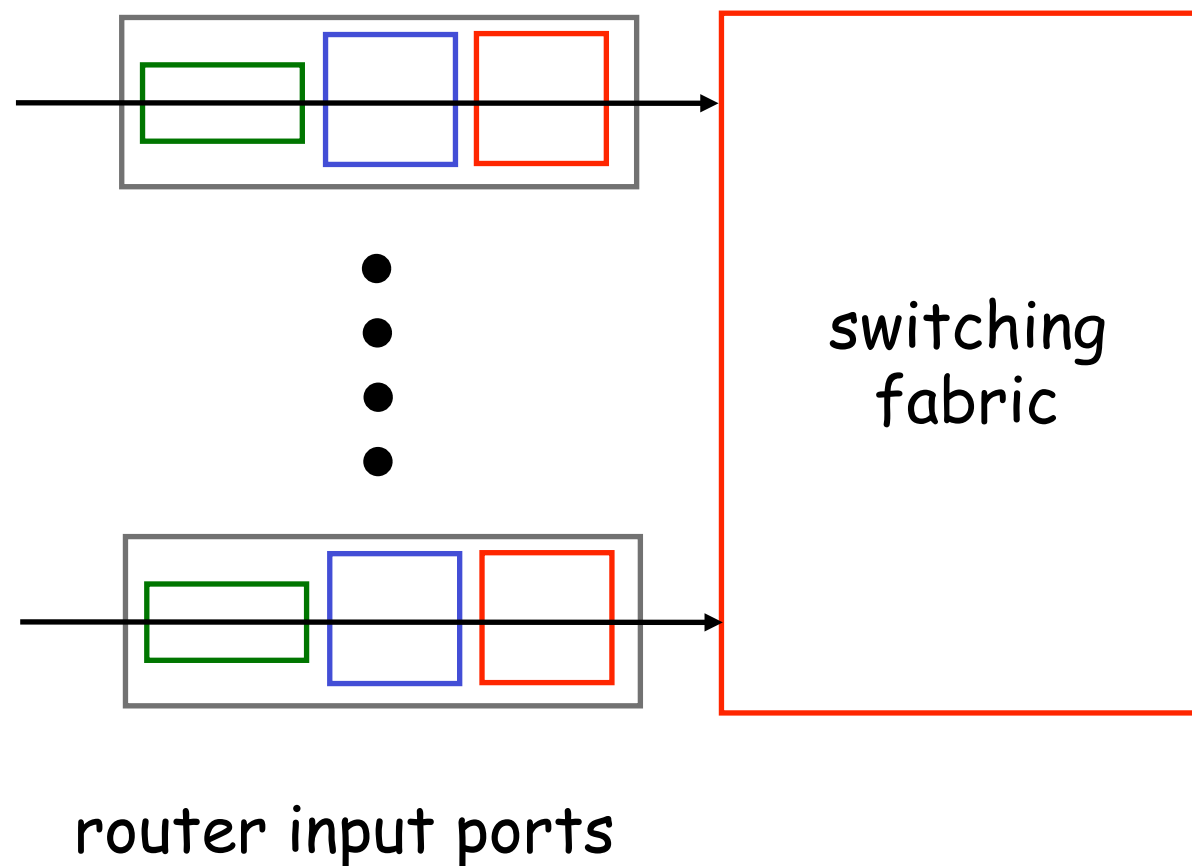

router input ports

Router Architecture Overview

two key router functions:

- ❖ run routing algorithms/protocol (OSPF, BGP)
- ❖ forwarding datagrams from incoming to outgoing link

Input Port Functions

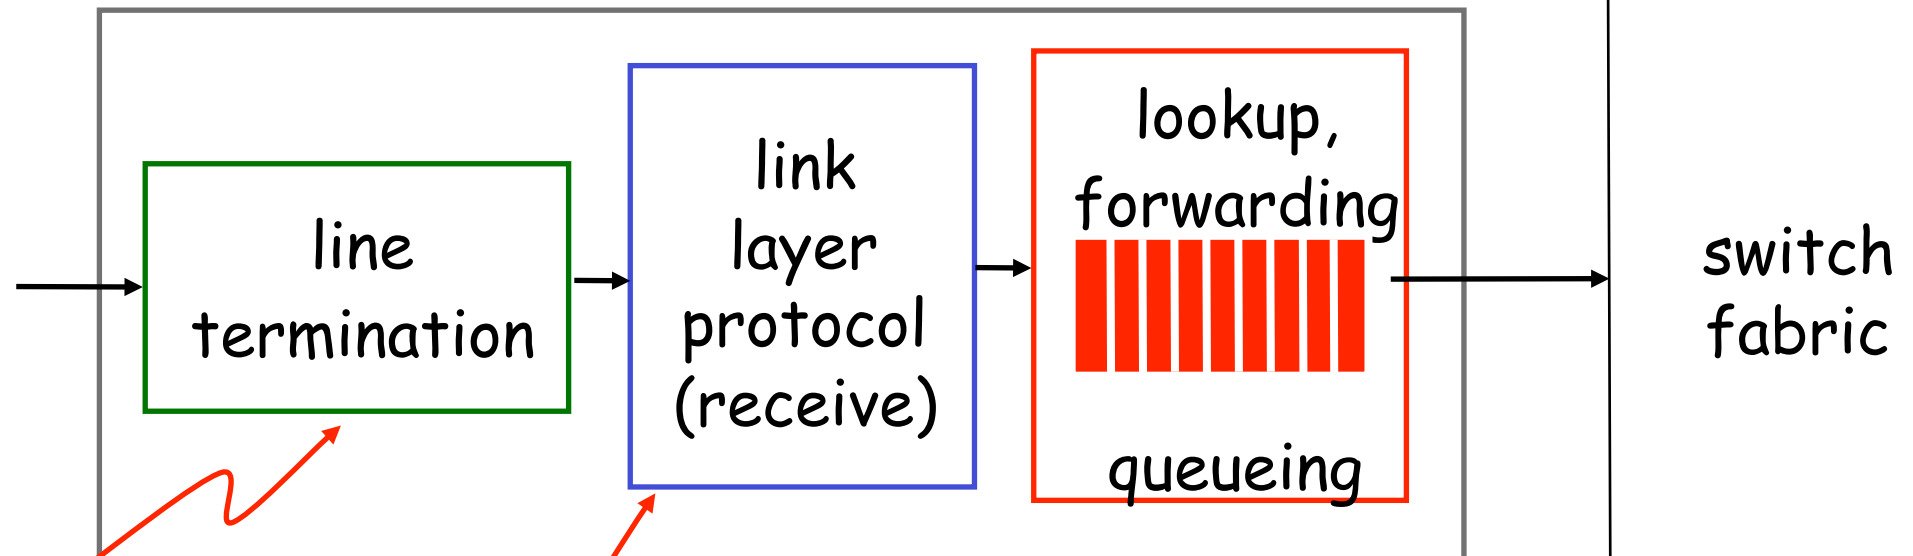

Input Port Functions

Physical layer:
bit-level reception

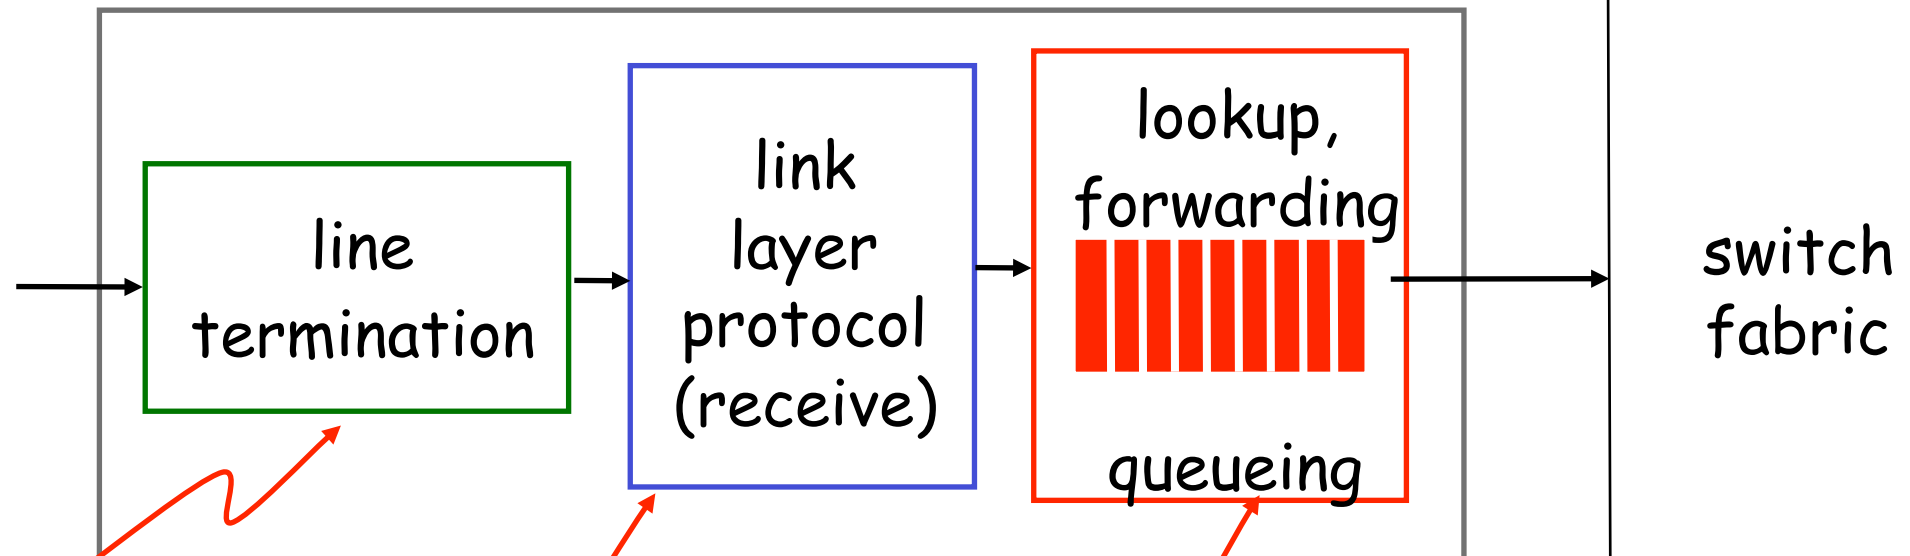

Input Port Functions

Physical layer:
bit-level reception

Data link layer:
e.g., Ethernet

Input Port Functions

Physical layer:
bit-level reception
Data link layer:
e.g., Ethernet

Decentralized switching:

Input Port Functions

Physical layer:
bit-level reception
Data link layer:
e.g., Ethernet

Decentralized switching:

- ❖ given datagram dest., lookup output port using forwarding table in input port memory

Input Port Functions

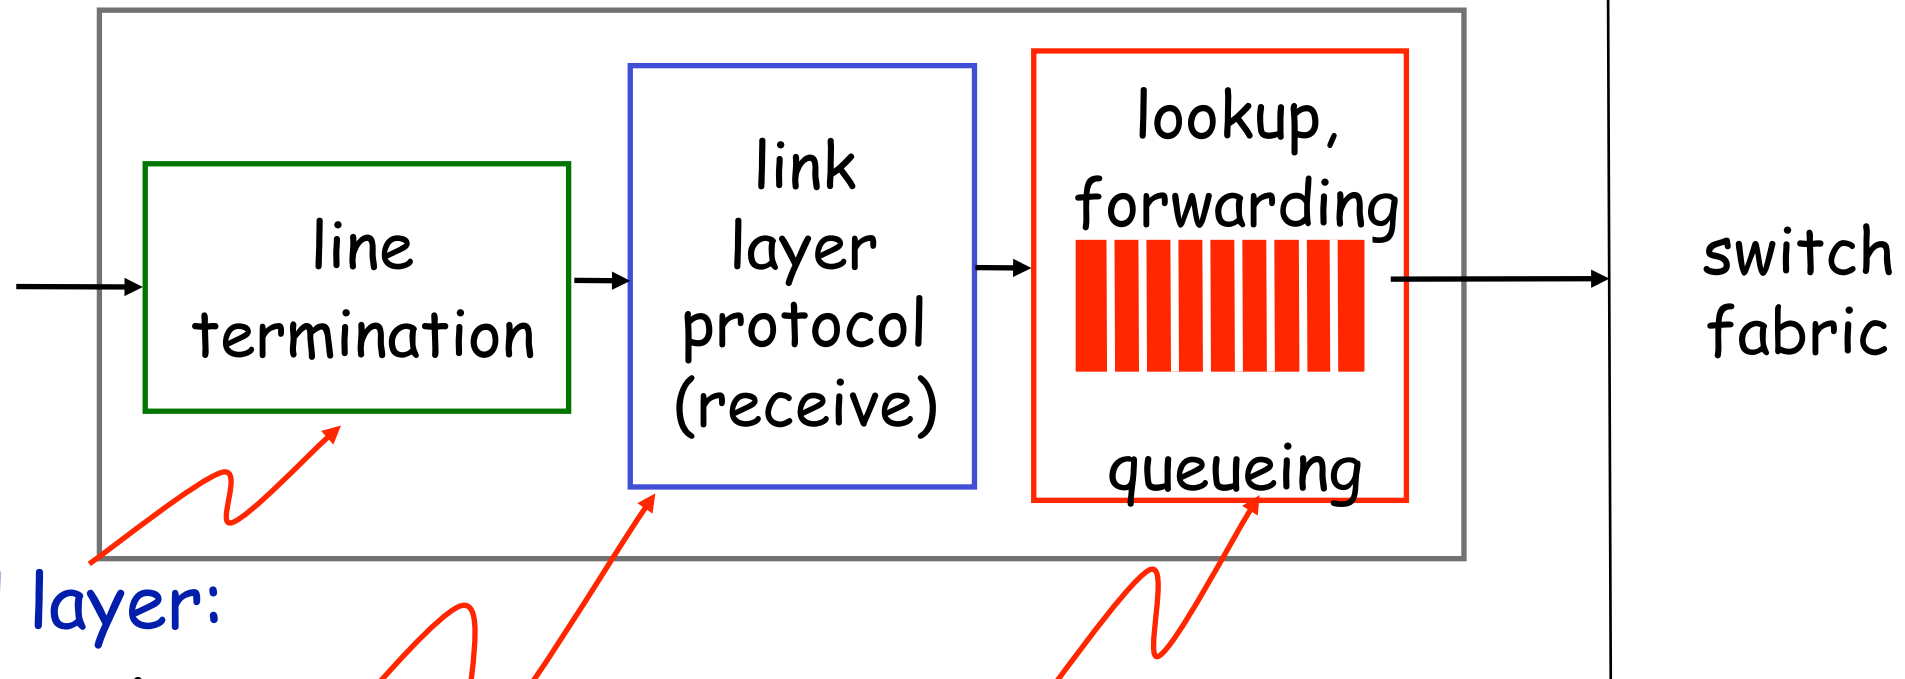

Physical layer:
bit-level reception
Data link layer:
e.g., Ethernet

Decentralized switching:

- ❖ given datagram dest., lookup output port using forwarding table in input port memory
- ❖ goal: complete input port processing at 'line speed'

Input Port Functions

Physical layer:
bit-level reception
Data link layer:
e.g., Ethernet

Decentralized switching:

- ❖ given datagram dest., lookup output port using forwarding table in input port memory
- ❖ goal: complete input port processing at 'line speed'
- ❖ queuing: if datagrams arrive faster than forwarding rate into switch fabric

Switching fabrics

Switching fabrics

- ❖ transfer packet from input buffer to appropriate output buffer

Switching fabrics

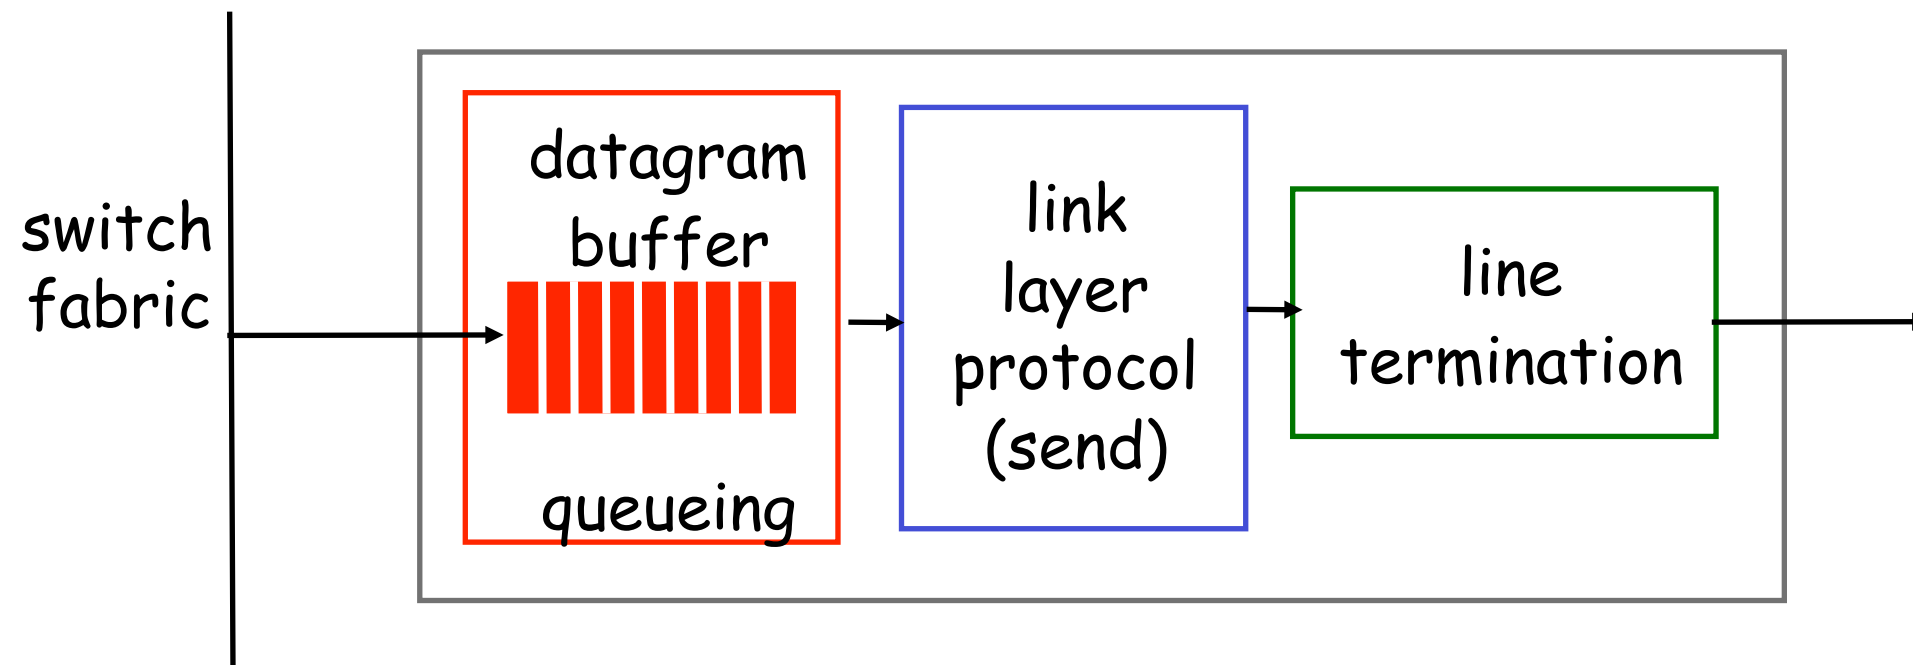

- ❖ transfer packet from input buffer to appropriate output buffer
- ❖ switching rate: rate at which packets can be transfer from inputs to outputs
 - often measured as multiple of input/output line rate
 - N inputs: switching rate N times line rate desirable

Switching fabrics

- ❖ transfer packet from input buffer to appropriate output buffer
- ❖ switching rate: rate at which packets can be transfer from inputs to outputs
 - often measured as multiple of input/output line rate
 - N inputs: switching rate N times line rate desirable
- ❖ three types of switching fabrics

Output Ports

- ❖ **buffering** required when datagrams arrive from fabric faster than the transmission rate
- ❖ **scheduling discipline** chooses among queued datagrams for transmission

Output port queueing

at t , packets move
from input to output

one packet time later

- ❖ buffering when arrival rate via switch exceeds output line speed
- ❖ queueing (delay) and loss due to output port buffer overflow!

How much buffering?

How much buffering?

- ❖ RFC 3439 rule of thumb: average buffering equal to "typical" RTT (say 100 msec) times link capacity C
 - e.g., $C = 10$ Gpbs link: 1 Gbit buffer
 - comes from simple model of TCP behavior (which we'll get to)

How much buffering?

❖ RFC 3439 rule of thumb: average buffering equal to "typical" RTT (say 100 msec) times link capacity C

- e.g., $C = 10$ Gpbs link: 1 Gbit buffer
- comes from simple model of TCP behavior (which we'll get to)

❖ recent recommendation: with N flows, buffering equal to $\frac{RTT \cdot C}{\sqrt{N}}$
